#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In Claims 1-3 the added language is unclear as to what is meant by "resembling a linearly tapered rectangle". Unfortunately this new term is no more descriptive of the antenna geometry than the previous. In fact it tends to make the terms indefinite when used together. Clarification is required in order to provide a clear recitation of a complete and properly operating device.

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over European Pat. 1146589 (Aoyama et al.).

Regarding Claims 1-5, Aoyama et al. show in Fig. 20(a), a radiation patch of a planar inverted-F antenna 13 having an asymmetrical shape with variable width and length tapered sides as in a tapered rectangle. The shape and size of the

Application/Control Number: 10/526,078

patch determines resonant, operational frequency and bandwidth. These characteristics are well known to those skilled in the antenna art. See column 8, paragraph "[0030]" which discusses the dimensions of the patch, relating to inductance and capacitance and that defines the resonant frequency.

#### Response to Arguments

5. Applicant's arguments filed 6/27/2006 have been fully considered but they are not persuasive. Specifically, the length and width of all patch antennas determine the operating characteristics, frequency of operation, gain, and antenna pattern. These parameters cannot be avoided when design patch size since it is directly related to resonance. Since the reference shows all claimed structure it is not seen that the claims at hand patentably define thereover. Thus, the rejections stand.

#### Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
